

Experiment No.	06
Experiment Title.	To Connect Flutter UI with fireBase database
Roll No.	02
Name	Vanshika Ambwani
Class	D15A/D15B
Subject	MAD & PWA Lab
Lab Outcome	LO3: Analyze and Build production ready Flutter App by incorporating backend services and deploying on Android / iOS
Grade:	

Experiment No. 6

Aim:-

To Connect Flutter UI with fireBase database

Theory :

Firebase provides a powerful backend solution for Flutter applications, enabling features like authentication, real-time database, and cloud storage. By integrating Firebase, developers can easily manage user authentication and store data without setting up a separate backend. Firebase is a cloud-based platform by Google that provides backend services for mobile and web applications, eliminating the need to manage servers. It integrates seamlessly with Flutter to enhance app functionality, security, and performance.

It includes Authentication (email, social logins, phone sign-in), Cloud Firestore & Realtime Database for real-time data syncing, and Cloud Storage for handling images, videos, and documents. Cloud Messaging (FCM) enables push notifications, while Crashlytics and Performance Monitoring help in debugging and optimizing app performance. Remote Config allows updating app features without requiring updates, and Analytics provides insights into user behavior. With Firebase, Flutter apps can be more scalable, secure, and feature-rich without complex backend management.

Code:-

```
// File generated by FlutterFire CLI.

// ignore_for_file: lines_longer_than_80_chars,
// avoid_classes_with_only_static_members

import 'package:firebase_core/firebase_core.dart' show FirebaseOptions;
import 'package:flutter/foundation.dart'

    show defaultTargetPlatform, kIsWeb, TargetPlatform;

/// Default [FirebaseOptions] for use with your Firebase apps.
///
/// Example:
/// ```dart
/// import 'firebase_options.dart';
/// // ...
/// await Firebase.initializeApp(
///   options: DefaultFirebaseOptions.currentPlatform,
```

```

/// );
/// ```

class DefaultFirebaseOptions {
  static FirebaseOptions get currentPlatform {
    if (kIsWeb) {
      return web;
    }
    switch (defaultTargetPlatform) {
      case TargetPlatform.android:
        return android;
      case TargetPlatform.iOS:
        throw UnsupportedError(
          'DefaultFirebaseOptions have not been configured for ios - '
          'you can reconfigure this by running the FlutterFire CLI again.',
        );
      case TargetPlatform.macOS:
        throw UnsupportedError(
          'DefaultFirebaseOptions have not been configured for macos - '
          'you can reconfigure this by running the FlutterFire CLI again.',
        );
      case TargetPlatform.windows:
        throw UnsupportedError(
          'DefaultFirebaseOptions have not been configured for windows - '
          'you can reconfigure this by running the FlutterFire CLI again.',
        );
      case TargetPlatform.linux:
        throw UnsupportedError(
          'DefaultFirebaseOptions have not been configured for linux - '
          'you can reconfigure this by running the FlutterFire CLI again.',
        );
    }
  }
}

```

```
default:
  throw UnsupportedError(
    'DefaultFirebaseOptions are not supported for this platform.',
  );
}
}
```

```
static const FirebaseOptions web = FirebaseOptions(
  apiKey: 'AlzaSyBGZ4Uen3ahPFlalRk8ySIAvbRXHfyvH1Y',
  appId: '1:708737726793:web:aab7601652171bb49fc298',
  messagingSenderId: '708737726793',
  projectId: 'foodie-recipe-app',
  authDomain: 'foodie-recipe-app.firebaseio.com',
  storageBucket: 'foodie-recipe-app.appspot.com',
);
```

```
static const FirebaseOptions android = FirebaseOptions(
  apiKey: 'AlzaSyCumm_1kNLPnfmI53MIzzzG0N9zRq4X4i0',
  appId: '1:708737726793:android:0bb9e209de2093259fc298',
  messagingSenderId: '708737726793',
  projectId: 'foodie-recipe-app',
  storageBucket: 'foodie-recipe-app.appspot.com',
);
}
```

Output:-

× Add Firebase to your Android app

- ✓ Register app
Android package name: com.example.my_app
- ✎ Download and then add config file
- ✎ Add Firebase SDK
- 4 Next steps

You're all set!

Make sure to check out the [documentation](#) to learn how to get started with each Firebase product that you want to use in your app.

You can also explore [sample Firebase apps](#).

Or, continue to the console to explore Firebase.
